

TC003 / Top500 rank 3

Comment-Before-Question

Phase 5 Batch 1 v24 - full standalone TC001-grade Top500 technique package

Core move

Before asking a question, add a short, real observation, acknowledgement or reaction connected to what they said.

Formula

Hear the content -> make one relevant comment -> ask one question -> stop and listen

Calibration cue

They answer with more detail They do not tense up at the question The conversation feels smoother than question-answer-question They ask you something back later If the person gives shorter answers, looks tense or corrects the frame, lower intensity immediately.

Minimum viable move

Say one honest comment, then ask one clean question: "That sounds like a big shift. What made you decide?"

Failure mode

The main failure mode is adding a fake or overlong comment that feels like a scripted preamble before interrogation.

Field tip

One real comment buys one clean question.
