

Spot the Energy

Use observable cues before choosing a follow-up.

Energy rises

More detail, quicker reply, warmer tone, examples, humour, questions back, repeated return.

Energy drops

Short answers, flatter tone, politeness without detail, discomfort, topic change.

Energy shifts

The live thread moves elsewhere. Follow the new thread rather than dragging the old one back.

Minimum move

One observation plus one invitation. Avoid repeated commentary on their energy.

Field tip: Follow energy, not your agenda. One light test, then follow or release.

Boundaries and Recovery

Keep the person in control of direction.

Neighbour distinction

TC041 selects the thread by energy. TC001 follows, TC030 echoes, TC040 reflects meaning.

Autonomy guard

Use this to increase ease and relevance, not to pressure, sell, seduce or extract.

Recovery

"I may be reading that wrong." "No need to go there." "What direction would you rather take?"

Practice rule

Use once per conversation until it feels natural. Stop if energy does not increase.

Field tip: Follow energy, not your agenda. One light test, then follow or release.
