

TC046 Elicit-Provide-Elicit

Top500 rank 24 | v26

- Formula: Elicit -> Provide -> Elicit
- Move: draw out context or permission, offer information briefly, then elicit response or meaning
- Minimum: Would it be useful to hear one option? The option is X. What do you make of that?
- Best for: autonomy-sensitive advice, behaviour change, clinical-style explanations and coaching
- Avoid when: when you intend to ignore their response or when a brief directive is required
- Failure mode: using questions as decoration around advice you were going to impose anyway
