TC059 Combined field card

Energy-based topic switching — complete guide

Core move

Notice live energy -> close respectfully -> bridge -> offer choice -> calibrate.

Minimum viable move

“That may be enough on this for now. Want to switch gears?”

Use when

The thread is flat, circular, complete, or less useful than another adjacent thread.

Do not use when

Emotion, safety, accountability, or explicit preference says the current topic still needs attention.

Recovery

“I may have moved on too quickly. Do you want to stay with the previous point?”

Neighbour check

TC041 tracks. TC038 threads. TC056 detects preference. TC058 reflects feeling/need. TC059 switches.

Field tip

Do not change the subject. Close one door, point to the next, and let the other person help decide.

Autonomy rule: switch to protect usefulness, not to avoid emotion, accountability, or the other person’s concern.
