TC064 / Check before interpreting - Front

Core: turn your interpretation into a low-pressure question before treating it as true.

Formula: Tentative marker + specific interpretation + correction invitation.

Phrase: I may be reading this wrong - is it [A], [B], or something else?

Chain: Minimal encourager -> TC064 check -> reflection -> validation or clean request.

TC064 / Check before interpreting - Back

Use this before emotional labelling, meaning reflection, validation, or advice when the meaning is still uncertain.

Recovery: Thanks - I was reading that too narrowly. I will drop that interpretation.

Field tip: if you would not want someone to be certain about that interpretation of you, do not be certain about it for them.
