

Specific ask

TC068 / Top500 rank 68

Core move

Name the exact action, object, output and boundary so the other person can answer without guessing.

Formula

Context -> action -> object -> output -> boundary or opt-out.

Minimum viable phrase

Could you [action] [specific object] and tell/send/choose [specific output]?

Calibration

Continue when they answer the exact question. Adjust when they ask what you mean, give a vague yes, or show pressure.

Recovery

I made that too broad. The specific ask is X.

Use this to increase clarity and ease, not to pressure, extract or override autonomy.
