Careful normalising - combined

Front: core move and formula. Back: calibration, recovery and neighbour distinction.

Perception

Listen for: silly, dramatic, too much, I should not care, maybe it is just me.

Move

Name the specific context and make only the reaction understandable.

Phrase

Given how sudden that was, it makes sense you feel thrown.

Next step

What would help now? Support, repair, action, boundary or space?

Calibration

Continue if they soften, elaborate or correct details. Stop if they say you are minimizing.

Recovery

Let me say that more carefully: I am not trying to shrink what happened.

Neighbour check

TC006 names the feeling. TC005 validates concern. TC040 reflects meaning. TC070 lowers shame around the reaction.

Field tip

Normalise the reaction, not the problem.
