

TC071: Conversation re-entry

After interruption, restore the thread without pressure.

Break -> Thread -> Choice

"You were saying [X] before we got interrupted - want to pick that back up?"

Perception

A person, device, tangent, or practical task broke the shared thread.

Move

Lightly name the break, anchor the last meaningful point, and reopen the door.

Phrase

"We got interrupted. You were saying [specific thread]. Want to continue?"

Calibration

Continue if they re-engage. Soften if uncertain. Stop if they decline.

Recovery

"No pressure to continue - I only wanted to make sure it was not lost."

Safety

Continuity never outranks consent. Release the topic if the moment has passed.
