Interrogation avoidance

Front: ask without pressure

Perception

Notice stacked questions, why-pressure, narrow options, suspicious tone, or shorter guarded answers.

Move

Choose the one question that matters. Add why you are asking. Ask softly. Release pressure.

Formula

Observation or context + one soft question + autonomy release.

Field rule

After a sensitive answer, reflect or pause before asking another question.

Interrogation avoidance

Back: calibrate and repair

Calibration

Continue only when answers become fuller and tone relaxes. Slow down when replies get short, defensive, or delayed.

Neighbour check

TC003 softens one question. TC009 prevents self-turning. TC085 controls question quantity. TC076 controls question pressure.

Avoid when

Do not soften to extract private information. In safety-critical or formal contexts, ask necessary questions directly with a clear process frame.

Chain

Warm presence -> Comment-before-question -> Interrogation avoidance -> Strategic silence.
