

Bounded request: make the ask finite

Ask for one specific action inside a visible cost boundary.

Perception

Notice when your ask may feel open-ended: unclear time, scope, effort, decision, or exit.

Move

Name one specific action and one honest boundary before asking for the yes.

Phrase

Could you review only the summary by Friday? No line edit needed.

Calibration

If they hesitate, narrow once. If they decline, release the ask cleanly.

Recovery

I made that too broad. The smaller ask is just the first paragraph.

Chain

Clean request -> bounded request -> autonomy release.

Core formula

Could you [specific action] within [bounded scope/time/effort] by [when]? If not, [release].
