

- Formula: Point -> Reason -> Example -> Point
- Move: make one point, give one reason, show one example, then return to the point
- Minimum: My point is X. The reason is Y. For example, Z. So the short answer is X.
- Best for: concise recommendations, explanations, meeting contributions and interview answers
- Avoid when: high-emotion moments, active conflict, exploratory listening or when the other person needs validation first
- Failure mode: turning a concise structure into a rigid mini-speech
- Neighbour: BLUF - Use PREP when the Point -> Reason -> Example -> Point structure is the main need; use BLUF when that adjacent move better serves the moment.
- Neighbour: STAR - Use PREP when the Point -> Reason -> Example -> Point structure is the main need; use STAR when that adjacent move better serves the moment.
