

- Formula: Situation -> Task -> Action -> Result
- Move: tell a concrete example by setting the scene, clarifying the task, naming the action and showing the result
- Minimum: Situation: X. Task: Y. Action: Z. Result: R.
- Best for: interviews, performance reviews, concise stories, evidence of skill and lessons from experience
- Avoid when: live conflict, vulnerable disclosure or when a person needs a direct answer rather than a story
- Failure mode: overstuffing the example with background and losing the action/result
- Neighbour: CARL - Use STAR when the Situation -> Task -> Action -> Result structure is the main need; use CARL when that adjacent move better serves the moment.
- Neighbour: PREP - Use STAR when the Situation -> Task -> Action -> Result structure is the main need; use PREP when that adjacent move better serves the moment.
