

- Formula: Context -> Action -> Result -> Learning
- Move: tell what happened, what you did, what resulted and what you learned
- Minimum: Context: X. Action: Y. Result: Z. Learning: L.
- Best for: reflection, supervision, interviews, debriefs, learning stories and development conversations
- Avoid when: when you need a direct recommendation or when reflection would sound self-protective
- Failure mode: ending with a vague lesson that does not change future behaviour
