

- Formula: What? -> So What? -> Now What?
- Move: separate observation, meaning and next action so reflection becomes usable
- Minimum: What happened? Why does it matter? What is the next small step?
- Best for: debriefs, supervision, learning reviews, journalling, project retrospectives and reflective practice
- Avoid when: when someone is overwhelmed, needs validation first or cannot safely act yet
- Failure mode: jumping to Now What before the meaning is understood
- Neighbour: CARL - Use What? So What? Now What? when the What? -> So What? -> Now What? structure is the main need; use CARL when that adjacent move better serves the moment.
- Neighbour: Meaning Reflection - Use What? So What? Now What? when the What? -> So What? -> Now What? structure is the main need; use Meaning Reflection when that adjacent move better serves the moment.
