Similarity signalling

Combined front/back card - editable SVG source

Front - SIGNAL

Spot a real overlap -> Isolate one small point -> Ground it in evidence -> Name it lightly -> Add a return -> Look for landing.

Back - calibration and recovery

Continue when they open up. Adjust when they go flat. Stop when it minimises or pressures. Recovery: "I made that too much about my version. Back to yours."

Neighbour choice

TC039 finds common ground. TC041 follows topic energy. TC010 warms through presence.
TC054 names one true overlap and returns focus.
