TC058 COMBINED CARD

Feeling + Need + Pause

Perception -> Move -> Phrase -> Calibration -> Recovery -> Chain

1. Notice the cue: tone, repeated words, intensity, hesitation, or charged phrase.
2. Name one likely feeling: frustrated, disappointed, tense, relieved, hurt, uncertain.
3. Name one likely need: clarity, respect, choice, inclusion, reliability, acknowledgement.
4. Say it tentatively: "It sounds..." / "I may be reading this wrong..."
5. Pause. Let them accept, correct, or decline.

Neighbour choices:
TC006 if only the feeling is visible. TC040 if the issue is broader meaning. TC053 if you need full OFNR.

Do not diagnose. Do not corner. Do not use the reflection to steer toward your agenda.

Best field version: "It sounds [feeling] because you needed [need]. I may be reading that wrong."
