Conversation bookmarking

Full field card: perception -> move -> phrase -> calibration -> recovery -> chain

Perception

Notice a side-thread that matters but does not need immediate handling.

Move

Name it as a bookmark so the person hears that it is protected.

Phrase

I want to bookmark that because it matters. Let us come back after this part.

Calibration

If they seem reassured, continue. If not, strengthen the return path or address it now.

Recovery

I bookmarked that and did not come back. Let me return now.

Chain

Pair with Topic Energy Tracking, Summary Check, Thread Return, and Callback Bridge.

Neighbour distinction

Bookmarking saves a point. Conversation threading manages several active threads. Thread return reopens a saved point.

Safety line

Use to preserve clarity and dignity, not to avoid, pressure, or bury concerns.
