Front - Make the ask answerable

TC068 / Top500 rank 68 / Specific ask

Notice vague ask words. Replace them with action, object, output and boundary.

- Action: review / decide / send / choose
- Object: exact paragraph / option / date / decision
- Output: yes-no / one risk / three edits / owner
- Boundary: by when / time box / no need if not feasible

Back - Keep specificity non-coercive

TC068 / Top500 rank 68 / Specific ask

Specific ask reduces ambiguity. It does not hide a large demand or remove choice.

- Warning: specific can still be too large
- Calibration: ease means exact answer or clear constraint
- Recovery: I made that too broad. The specific ask is X.
- Neighbour check: size = Small ask; ambiguity = Specific ask
