TC078 Callback bridge - combined

Full teaching spine, formula and neighbour choice.

Perception

An earlier detail, concern, feeling, or value was mentioned and then the conversation moved on.

Treat it as a clue, not proof.

Move

Wait for a pause, then bridge back with permission and a light reason.

Do not yank the topic backward.

Phrase

Can I come back to the part where you said X? I did not want to lose that thread.

Small, plain, optional.

Calibration

If they expand, follow one step. If they hesitate, release pressure immediately.

Expansion is consent to continue.

Recovery

I may have over-weighted that point. We can stay with the current topic.

Own the miss cleanly.

Chain

Summary check -> Callback bridge -> Clean request -> Autonomy release.

Use after the current point lands.

Neighbour choice

Current cue = live-thread follow-up. Earlier cue = callback bridge. Several threads = conversation threading.

Choose by timing and purpose.

One-line close

Can I loop back to X? I did not want to lose that thread.

If they pick it up, follow. If not, let go.

Field tip: The best callback bridge sounds like care, not control. Use once, then follow or release.
