

TC083: Ask what would make it workable

Move from resistance to respectful conditions.

Perception

Notice hesitation, pushback, delay, or "this will not work" without treating it as defiance.

Move

Validate the friction and ask what would make the next step workable, if anything.

Phrase

"Got it. What would make this workable, if anything?"

Calibration

Continue only if they become more specific, thoughtful, or collaborative.

Recovery

"I may be pushing too hard. If this is a no, I will respect that."

Chain

Validate concern -> Workability question -> Autonomy release -> Low-friction ask.

Use this to increase clarity and agency, not to wear down a no.
