

Risk reduction

Lower the perceived downside before asking for the next step

TC089 / Top500 rank 89 / v26.3

Core formula

Step + risk cap + control/exit + small next ask

1. Spot risk

Hesitation, objection, silence, guarded tone, delay, or fear of being trapped.

2. Cap downside

Limit time, scope, exposure, commitment, reversibility, or consequence.

3. Give control

Make decline, pause, revision, or a smaller version explicitly acceptable.

4. Ask small

Invite a first reaction, quick test, yes/no, or one remaining risk.

Minimum viable phrase

This is just a first read, not a commitment. A quick no is fine.

Calibration question

If they still hesitate, ask: What risk is still present for you?

Field rule

Do not say "no pressure" unless the exit is real and visible: quick no, no chase, first page only, one-week test, rollback condition.
