Risk reduction - combined

Full field card: small step, easy exit, real choice

TC089 / Top500 rank 89 / v26.3

Core move

Make the next step feel safer by honestly reducing time, commitment, exposure, consequence, ambiguity, or pressure.

Formula

Step + risk cap + control/exit + small next ask.

Minimum viable phrase

This is just a first read, not a commitment. A quick no is fine.

Use when

Hesitation is about hidden cost: time, conflict, embarrassment, loss of control, commitment, or unclear consequences.

Avoid when

The real risk is high, formal, unsafe, consent-sensitive, or cannot be capped honestly.

Calibration

Continue when they become more specific. Adjust if they ask what the catch is. Stop after a clear no.

Recovery

I may have made that sound lower-risk than it is. Let me restate the real trade-off.

Field tip

Do not say "no pressure" unless the exit is visible: quick no, no chase, first page only, one-week test, rollback condition.

Chain

Validate the concern -> reduce risk -> make a small ask -> release autonomy.
