TC093 - How-so prompt

Perception -> Move -> Phrase -> Calibration -> Recovery -> Chain

Core move

Ask a warm, neutral how-question to reveal the mechanism behind a compressed statement.

Minimum viable move

Say "How so?" and stop talking. Let the person define the path.

Best phrases

How are you seeing it? / How does that show up? / How do you see it playing out?

Calibration

Continue if they give an example, mechanism or criterion. Soften if they sound defensive.

Recovery

I am not challenging it - I am trying to understand the shape of it.

Chain

Comment first if trust is low. Then ask how, reflect, summarise and choose the next move.

Use TC093 when

A compressed statement needs mechanism, example or criteria.

Use neighbours when

Mirror for continuation, loaded-word for wording, story invitation for narrative.

Avoid

Question stacking, skeptical tone, repeating the same prompt, or asking after enough is clear.

Recovery

Soften: "You do not need to justify it. I am trying to understand what you are noticing."
