Bounded request: combined card

The full move: perception -> move -> phrase -> calibration -> recovery -> chain.

1. Spot hidden cost

What would they have to guess: scope, time, effort, decision range, or obligation?

2. Bound the request

Name the exact action and one honest limit.

3. Add release

Make no, later, or smaller safe.

4. Stop talking

Do not over-justify after the ask.

5. Calibrate

Green: clear answer. Yellow: narrow. Red: release.

6. Keep the boundary

If they say yes to a bounded ask, do not expand it later.

Neighbour cues

Clean request = direct action. Small ask = smaller step. Bounded request = visible cost envelope.

Safety

Bounded clarity must preserve autonomy, dignity, and honest refusal.

Core formula

Could you [specific action] within [bounded scope/time/effort] by [when]? If not, [release].
